I have chosen to use Menlo Park as my city of chose. Being from the Bay Area I know that Menlo Park is a small city and should contain enough data while at the same time, not overwhelming me.

This file includes:

Project 3 - the document that answers the question on the rubric

Sample OSM - the sample OSM file used in this project

project_3.py - the python file that was used to gather statistics and extract the data to a JSON file

mongo_analysis.py - the python file used to query the data using pymongo
